

LYK Vertical Oil-fired Hot Water Boiler Series

LYK is vertical type oil-fired hot water boiler, generating hot water by means of burning of fuel oil, applicable for shipboard heating of jacket cooling water, fuel oil tanks, domestic water, air-conditioning, etc.

The boiler feature automatic control and fail-safe design for unmanned operation of modern ships. Alternatively, the boilers can be operated manually in case of emergency or cold starting.

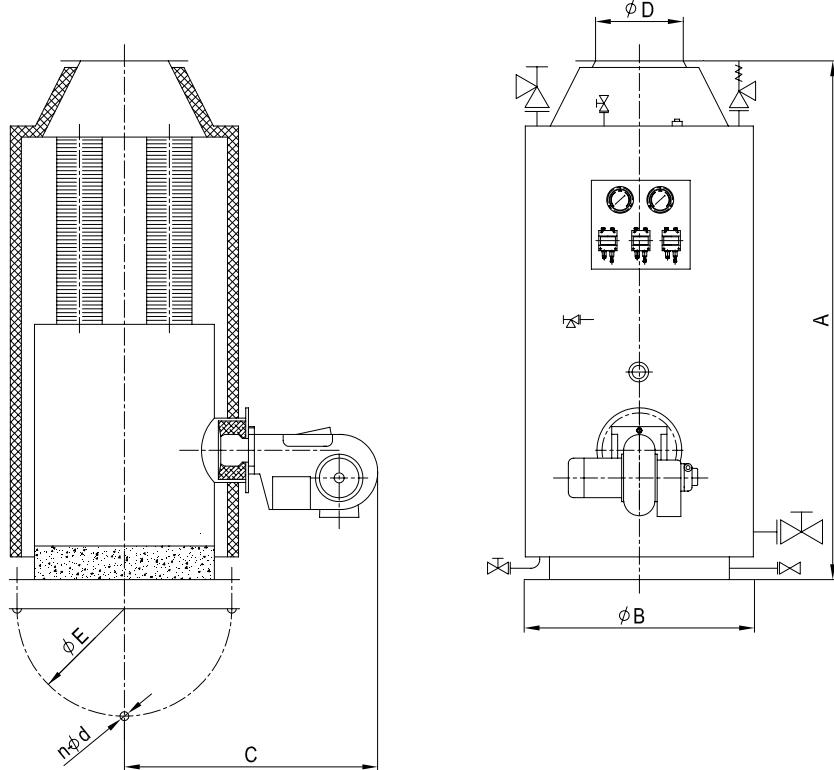

Besides of burning fuel oil, LYK type hot water series is upgradeable with electric heating device as fully automatic combined oil-fired/electric hot water boiler.

Boiler Construction

LYK type hot water boiler is assembled 100% by welding, the boiler shell and inner cores forms the water chamber. The inner cores are consisted a furnace in the lower part, lined with refractory in the bottom and connected to square pin-tube elements on top. Each square pin-tube element has numerous steel stud welded onto the inner surface to increase heat transfer efficiency.

Square Pin-tube Element

Boiler Type	Technical data & dimensions (mm)								Connection size (mm)					
	Capacity (MJ/h)	Maximum working pressure (MPa)	A	B	C	D	E	n-d	Weight (kg)	Water inlet valve	Water outlet valve	Safety valve	Water drain valve	Furnace drain valve

Note:

1. *Boilers are delivered based on a technical specification agreed with the customer who specified technical requirements, scope of delivery and classification.*
2. *Basic design data should include boiler model, type, specifications, capacity, working pressure, fuel oil type, inlet/outlet water temperatures, power supply.*
3. *Specific requirements beyond standard on request.*
